

Improving the world one smart move at a time.

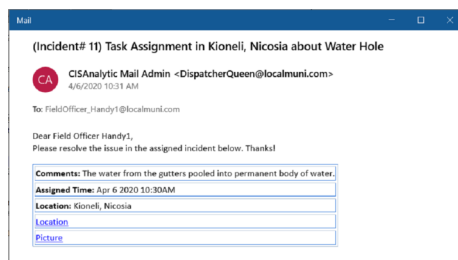

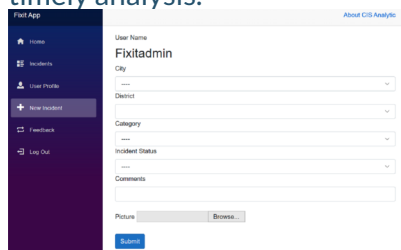

CIS Analytic is offering Fixit as the Participatory, Transparent Local Governance (PTLG) solution for municipality level governments enabled by mobile connectivity, analytics and cloud technologies.

Our solution aims to improve the daily lives of local residents and the routine tasks of the local government bodies such as reporting pot-holes on the road, picking up unscheduled garbage and debris, powerline issues, abandoned properties, spraying for mosquitos - just to name a few.

How does it work?

 Mobile Collective Data Gathering

Field officers and local volunteers capture local data and upload for timely analysis.

Flexible Architecture

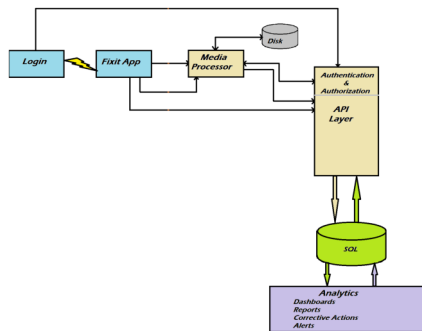

Your entire application and its data housed on cloud or on premises, depending on your choice.

Quick Time-To-Value

Get up and running after a quick consultation and minimal configuration - in day!

Minimal Effort Approach

Data collection typically outsourced to local volunteers, reporting and alerts are automated.

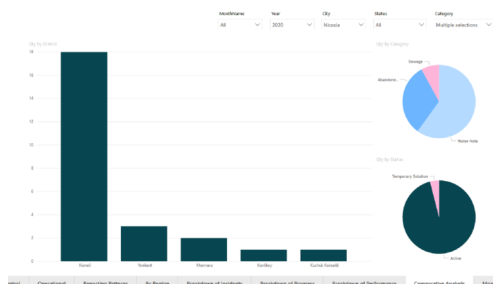

Analytics

Continual data from the field is analyzed for reporting, effective resource planning and corrective actions.

Integrations

Field data is incorporated into data-mart via real-time integration framework.

Reporting & Alerts

The data collection automatically fills reports and triggers preset alert as thresholds are met. Manual incident assignment to field officers can be done directly from Dashboard!

Tip: It is best to enable local volunteers to capture local issues in their neighborhood and upload the data for analysis to the cloud.
